

Validation Ready Networks, on the LabAIOps platform.

NodaliQ turns your test lab into a source of truth you own — model it once, stand up the exact testbed on demand, and let Noda keep it grounded in truth. Runs in your infrastructure.

THE PROBLEM

The test lab got left behind.

Production networks went from manual, to automated, to agentic. The lab stayed manual, opaque, and brittle — spreadsheets, tribal knowledge, and a walk to the rack. **You can't ship faster than you can validate.**

WHAT NODALIQ DOES

Finishes the shift: NetOps → LabAIOps.

Your lab becomes a **Validation Ready Network** — a test environment that always reflects reality: modeled once, stood up on demand, and continuously reconciled. So every test runs against the real thing, never a guess.

WHAT YOU GET

- **Reproducible testbeds** — the same environment, run-to-run, months later.
- **Faster time-to-isolation** — grounded AI finds the fault, even where you wouldn't look.
- **No stranded resources** — see what's used and idle; release it across time zones.
- **One source of truth** — devices, VMs, and cabling in one place everyone can see.
- **Scale by automation, not headcount** — exponential output on linear cost.

Nine kinds of lab. One job: proof you can stand behind.

SERVICES

We help you get there — **lab modeling**, guided **onboarding**, and deployment support to stand up your first Validation Ready Networks. Then your team runs it.

CAPABILITIES

	One source of truth Devices, VMs & cabling in one place — built on open NetBox.
	Stand up on demand State intent → a ready, isolated testbed. One sentence in.
	Automated L1 switching ROADMAP Rewire the lab without touching a cable — any port to any port.
	Detect · isolate · guide Noda catches drift, isolates the cause, guides the fix. Never auto-heals.
	Grounded AI (Ask Noda) Answers over your real lab, with citations. Sees only your slice.
	Permission-scoped People and AI see only what they're allowed to. Nothing leaks.

Your data is yours — no lock-in.
 Built on open-source NetBox — the source of truth you own. NodaliQ enriches it; if you ever move on, your data goes with you. We earn your stay; we never trap it.

Deployment: self-hosted & air-gap capable — runs in your infrastructure. **Foundation:** NetBox (open-source DCIM). **Interface:** web UI + agent-native MCP.
